implement by HTML,CSS,React.JS and Tailwind css Library.This app is good for managing your products and their amount and some things like that. This project has been implemented in a responsive design.
♦ Live Demo: Inventory | GitHub: Source Code

🛠 SKILLS

Expert In HTML And CSS
Implement HTML and CSS to creating initial layout, considering responsive web design scenarios.

Bootstrap, Tailwind And Materialize Framework
Utilizing each one of these framework to improve the efficiency of user interface styles.

Expert In Git And Remote Git Repositories (GitHub)
Utilizing the git flow procedure including (branching, pull, push, standard commit) to better manage the project and code review.

React.Js Library (Mid-Level)
Creating super-fast single page application using react.js library, with reusable, maintainable and manageable Functional components.Utilizing React Hooks with Functional component to get rid of redundancy and increasing the efficiency and clean code standards. Mostly used ones are useState, useEffect.

Next.Js Library (Junior Level)

Familiarity with features such as automatic code splitting, server-side rendering, and static site generation to optimize website performance and user experience. Eager to further expand expertise in Next.js development through practical application and ongoing learning.

Call The Server And Working With API

Call the server with all the type of APIs to send request, analyze response and handle all errors in the efficient way to display on the client-side.

TypeScript Development

Experienced in leveraging TypeScript's type system to catch errors during development, enhance code readability, and facilitate collaboration within development teams.

Formik Library

As all the applications required authentication and authorization, getting data from user, validate, handle and send data to the server; the formic library is the most powerfull library to handle all these requirements.
